Please reject NAB petition 04-160. I hope the FCC will distinguish between local content and nationally broadcast content with a local interest. The local traffic and weather reports have been a tremendous benefit because I am able to avoid traffic delays that the local radio stations never broadcast. I am able to tune in a few minutes before I have to select one of two routes, which allows me to choose the one with the fewest delays. This option is simply unavailable with FM/AM radio.

Please do not take away the ability for satellite radio to broadcast this very valuable and beneficial information. This is something that the driving public needs and obviously wants.

Respectfully,

M. Beattie
